

SANTREN

Southern African Network for Training and Research on the Environment

<http://www.santren-elearning.com>

We are a Southern African Network for Training and Research on the Environment (SANTREN) made up of research and educational institutions and professionals in the SADC region, whose main objective is demand-oriented contribution to the improvement of information and the training courses in the SADC region in order to support efforts towards environmentally sustainable development.

Since 1996, we have developed face-to-face and eLearning environmental courses based on case studies focusing on problems affecting industry and society in southern Africa.

The eLearning courses developed are not only aimed to reach you wherever you are, but to also cut your costs of participation compared to standard “face-to-face” courses. Thus, you now have a possibility to improve your knowledge and skills without necessarily leaving your work place or home.

Water Quality Monitoring and Management

Air Pollution - issues, control and monitoring

Sustainable Environmental Management through Appropriate Waste Management Technologies

Environmental Management in Mining Industry - enhancing productivity with sustainability

Our other services include undertaking Research, Environmental impact assessments, Introduction of cleaner production in production processes, Environmental technology assessments, and Course development and delivery.

Our clients are found in the SADC Region and beyond.
